MEMORANDUM FOR THE RECORD

SUBJECT: PAR 204 - Contact Chip Printer

1. Recommendation is made that PAR 204 for the development and fabrication of a Contact Chip Printer under [] Contract [] be terminated. This recommendation is based on the fact that the present contract with [] for a similar printer is anticipated to fulfill the requirement.

2. At the time of presentation of requirements to [] in February 1964 they responded with revised objectives. However, a considerable number of exceptions still existed. They proposed to handle only a single input film roll, to expose and print on 9½ inch roll film with a subsequent cutting operation, punch card data input rather than keyboard or paper tape and anticipated only 100-200 lines per mm output material. This was proposed as a [] two year effort, and anticipating known changes and modifications to the [] proposal, this figure would probably be doubled at the time of contract completion.
